

New- Bell 407 Main Rotor Head Elastomerics from Airwolf Aerospace

Middlefield, Ohio. August 1, 2019 — Airwolf Aerospace has expanded its PMA product line with new Bell 407 Main Rotor Head Elastomerics. The new FAA PMA approved Dampers, Shear Bearings and Lead Lag (CF) Bearings are in stock for immediate shipment. These parts are equivalent to Bell P/N's: 407-310-100-107, 407-310-101-105 and 407-310-102-103

Airwolf has been reducing the operating costs of Bell 206, 204, 205, 212, UH-1 and Enstrom helicopters with its lower cost longer life TT Straps for over 11 years. They are pleased to be able to offer Bell 407 operators' similar savings and another option for sourcing Bell 407 elastomeric parts. Eric Wolff, Airwolf Aerospace's VP of Sales and Business Development said that, "As the aerospace industry continues to consolidate, independent small businesses such as Airwolf are crucial to operators as they fight to keep costs under control. Airwolf is always striving to give helicopter operators more choices and reducing their costs."

Airwolf has over 30 years of experience designing, certifying and manufacturing PMA and STC'd aircraft components. Contact us for more information on our cost saving Bell 407 Elastomerics, TT Straps and other helicopter components.
